

CorCalbindin Mouse Monoclonal Antibody

Host

Isotype

MCA-4H7

Species Cross-Reactivity

HGNC Name: CALB1 UniProt: P05937 RRID: AB 2572238

Immunogen: Full-length recombinant human calbindin protein, EnCor product Prot-r-Calb1. expressed in and purified from E. coli.

Format: Purified antibody at 1mg/mL in 50% PBS, 50% glycerol plus 5mM NaN₃

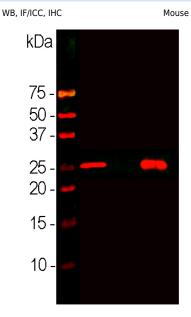

Storage: Store at 4°C for short term, for longer term store at -20°C

Recommended dilutions:

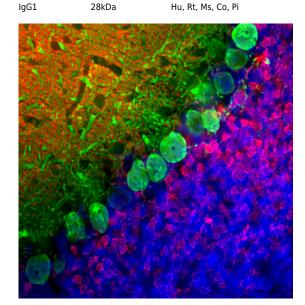

WB: 1:1,000-1:5,000. IF/ICC or IHC: 1:1,000.

Western blot analysis of different neuronal tissue lysates using mouse mAb to calbindin, MCA-4H7, dilution 1:2,000: [1] protein standard, [2] rat cerebellum, [3] pig hippocampus, and [4] cow cerebellum. Band at ~25 kDa corresponds to calbindin protein. heavily expressed in the cerebellum but less in hippocampus

Molecular Wt.

Immunofluorescent analysis of rat brain cerebellum section stained with mouse mAb to calbindin, MCA-4H7, dilution 1:1,000, in green, and costained with rabbit pAb to calretinin, RPCA-Calretinin, dilution 1:5,000 in red. The blue is DAPI staining of nuclear DNA Following transcardial perfusion with 4% paraformaldehyde, brain was post fixed for 24 hours, cut to 45µM, and free-floating sections were stained with the above antibodies. Calbindin antibody prominently labels the dendrites and perikarya of Purkinje cells in the molecular layer of cerebellum. In contrast the calretinin antibody stains granule cells, in the granualar layer, and their processes in the molecular layer.

Background:

Applications

Calbindin, also known as calbindin 1 or calbindin-D28k is a member of the large superfamily of cytoplasmic EF hand containing Calcium binding proteins and is expressed in the brain, intestine, kidney and pancreas (1-3). It is particularly concentrated in the dendrites and perikarya of cerebellar Purkinje cells, but is also found in many GABAergic interneurons in the cerebral cortex. These GABAergic interneurons in most cases express only one of three Calcium binding proteins, namely calbindin or parvalbumin or calretinin. As a result these important and physiologically distinct inhibitory interneurons can be identified and subclassified based on their content of these three

proteins (4-6).

The MCA-4H7 antibody was made against full length recombinant human calbindin expressed in and purified from *E. coli*, EnCor product Prot-r-Calb1. We have shown that the antibody binds calbindin cleanly on western blots and in sections but fails to recognize the related calretinin and parvalbumin próteins. It is therefore ideally suited for identifying and subclassifying cortical GABAergic neurons. The antibody works well for western blotting and for IF, ICC and IHC (see data under "Additional Info" tab). EnCor manufactures an alternate mouse monoclonal antibody to calbindin MCA-5A9 and a chicken polyclonal to calbindin CPCA-Calb, allowing double and triple labeling of appropriate cell and tissue samples.

FOR RESEARCH USE ONLY. NOT INTENDED FOR DIAGNOSTIC OR THERAPEUTIC USE.
